Description of the "piDai_xsy" shader

Albedo: Same as unity standard shader, using diffuse mapping.

NormalMap: To be a normal map, the image should be set to the normal map type in advance, as shown below:

Metallic OCC Smoothness: metallic channel is used similarly to unity's Metallic channel, where R corresponds to Metallic, G corresponds to OCC, B is empty, and A is Smoothness.

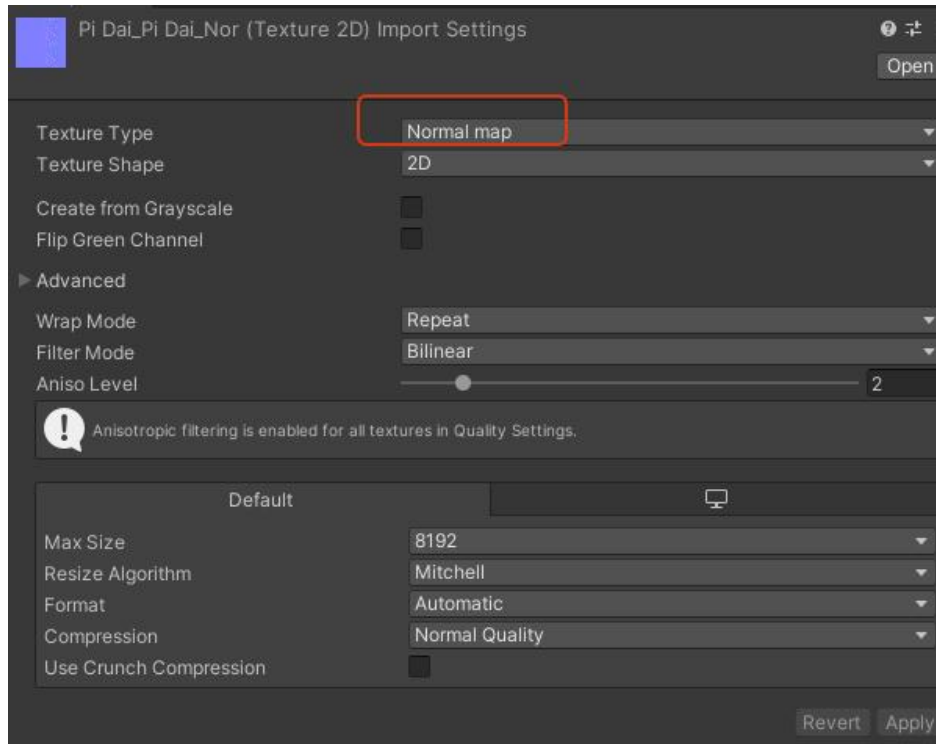

Flow Y OR N: Controls the flow.

Flow speed: Controls the flow speed.

关于“piDai_xsy” shader 的说明

Albedo: 同 unity standard shader，使用漫反射贴图。

NormalMap: 为法线贴图，应提前在将图片设置为 normal map 类型，如下图所示：

Metallic OCC Smoothness: 与 unity 的 metallic 通道用法相似，其中 R 通道对应 Metallic，G 通道对应 OCC，B 通道空，A 通道为 Smoothness。

Flow Y OR N:用于控制是否流动。

Flow speed:用于控制流动的速度。
